Applicant

ELECTRON PROCESSING SYSTEMS INC.

1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.
4. **REMINDER**

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices)(Article 39(1))(see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

International Publication No.  
PCT/US03/000000

## V. Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

### 1. STATEMENT

Novelty (N)	Claims <u>1-3</u>	YES
	Claims <u>NONE</u>	NO
Inventive Step (IS)	Claims <u>1-3</u>	YES
	Claims <u>NONE</u>	NO
Industrial Applicability (IA)	Claims <u>1-3</u>	YES
	Claims <u>NONE</u>	NO

### 2. CITATIONS AND EXPLANATIONS

Claims 1-3 meet the criteria set out in PCT Article 33(2)-(3), because the prior art does not teach or fairly suggest (in regards to independent claim 1) a method of irradiating, in a gaseous medium, a hollow open-mouthed container having an axis and having walls of varying thickness which comprises the dose delivered to the thicker portions by the primary electrons being supplemented by secondary electrons produced by scattering of said primary electrons by the gaseous medium of the container in addition to the accompanying features of the claim.

Furthermore, the prior art does not teach or fairly suggest (in regards to independent claim 2) a method of using reduced electron energy for the sterilization of preformed open-mouthed containers comprising the energy of the electrons being sufficient to provide the required minimum dose to all surfaces of the container while remaining below that required for full penetration of the thicker regions of the container in addition to the accompanying features of the claim. Claim 3 depends upon claim 2.

Claims 1-3 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.
